#### **Alphabet**

A list of words written in some unknown alphabet was found. It is known, however, that these words are in alphabetic order.

Write a program that will find the unique alphabetic ordering of used letters, or determine that no such ordering exists or that there is more than one possible solution.

# Input

The first line of input contains a positive integer N (N  $\leq$  100), the number of words. The following N lines contain the list of words found, one word per line. Each word consists of at most 10 lowercase letters.

### **Output**

The first and only line of output should contain all letters in alphabetic order. If no such ordering exists, output '!'. If there is more than one solution, output '?'.

### Sample input

# Sample output

5	luka
ula	
uka	
klua	
kula	
al	
4	!
jaja	
baba baja	
baja	
beba	
3	?
marko	
darko	
zarko
